

ZIPPED OPENINGS

EASY ACCESS TO YOUR SHRINK-WRAPPED SPACES

Access shrink-wrapped areas, winterized boats, confined spaces, thanks to white zippered doors (W) available in 3 passage heights. They can be installed with upward or downward opening.

Easy to install with adhesive tape (SH type), zippered doors are essential for long periods of protected storage.

Ideal for creating your own entrances, the white zipper strips have a strong, durable adhesive and a large-format zipper with a total opening over 2.00m length. They can be used to create a passageway in hard-to-reach places, or on shrink film where there isn't enough space for a small zippered door.

So you can get in and out of your covered space without damaging your shrink wrap.
